

YARD & DEPOT MANAGEMENT

Yard Manager for DAS Anywhere

Imagine the Depot of the Future...

Imagine a depot where all your operational needs are available at the touch of a button; where you're working at the heart of the action and able to orchestrate daily activities from the palm of your hand.

That's how we envisage the Depot of the Future. We're breaking down the barrier between the traffic office and engineering and putting people where they're needed most – with the vehicles in the yard.

Through the suite of DAS Anywhere solutions, we're building an integrated depot where all the current systems are brought together in one convenient place and able to be controlled from a device not a

desk.

We see the need for a brand-new role - the dispatcher. Much like air traffic control, the dispatcher is able to guide the vehicles as they move, coordinating the morning run-out, communicating with drivers, and keeping the depot running efficiently.

We hope that you're going to join us on this journey to creating the Depot of the Future.

Pete Adrey

Head of Sales Support

Yard Manager is a module with DAS Anywhere that offers a graphical representation of the depot. It's a mobile solution that breaks down physical barriers and puts the right people in the right place for optimal efficiency.

Yard Manager is a new concept set to transform the very nature of the early morning runout through a simple, easy to use system.

Developed for DAS Anywhere - but fully integrated with Trapeze's current Duty Allocation

System (DAS) - Yard Manager enables garage supervisors and controllers to reduce the costs associated with managing vehicle run-out, allocation, and many other aspects of depot management.

The system optimises depot efficiency, ensures yard safety and will pave the way for electric fleets by informing dispatchers of a vehicle's charge state. But perhaps most significantly, Yard Manager is a major step towards the flexible, mobile depot of the future – a future which is now being rapidly realised through DAS Anywhere.

Key Benefits ကြို့ For Operations

- Reduce depot infrastructure by moving traffic office into the yard
- Effectively manage satellite depots
- Reduce costs by enabling yard managers to optimise service runout
- Proactively plan for and manage electric vehicle charging

For Garage Supervisors

- Improve yard safety
- Manage your yard from the yard!
- Optimise running order to ensure efficient vehicle roll-out

For Engineering

• Report vehicle availability and maintenance issues immediately
